

For Whom the Wall Fell?

How are the former Soviet Union and other Central and Eastern European nations faring?

- Clear Failure (20%):** Countries that as of 2013 are still to reach the level of real income achieved back in 1990*
- Relative Failure (40%):** Countries that grew more slowly than the average rich OECD countries (less than 1.7% per capita per year)
- Keeping Up (10%):** Countries which have grown at or between 1.7 and 2% per capita – that are just about “keeping up” with the rich world.
- Success (30%):** Countries that grew by at least 2% per annum per capita over the past 25 years

SOCIAL IMPACT OF TRANSITION

Kristen Ghodsee and Mitchell A Orenstein
Russian and East European Studies
University of Pennsylvania

Research PUZZLE

- **Sharply Polarized Perspectives on Transition**
 - J-Curve
 - Disaster Capitalism
- **Perspectives are Highly Politicized**
- **And Embedded in Different Disciplines**
 - With different data, metrics, and results
- **Can these Janus-Faced Perspectives be Reconciled?**
- **Is a Consensus Narrative Possible?**
- **How Would it Guide Policy for Future?**

Research DESIGN

- **Gather data from different social science fields**
 - economic, demographic, public opinion, and ethnographic data
 - www.takingstockofshock.com
- **Triangulate the results**
- **Fit a narrative**

FINDINGS in a Nutshell

- We find strong evidence in the data for BOTH the J-curve and disaster capitalism narratives
- Data from different fields paints different pictures
- Contradictory Developments after 1989
 - Some people, some countries, some regions experience a J-curve transition
 - A majority of people across the post-communist European space experience a depression several times greater than the Great Depression of the 1930s
- Story of transition is millions of people becoming more prosperous while millions more are suffering the worst recession in modern history, while being told everything is going great.

Economic and Demographic DATA

- Analyze depth and duration of collapse
- Average indicators to produce country rankings
- Charts indicate top 10 and bottom 10 countries as one way to visualize the differential impacts of transition

Postcommunist Transitions Compared to the US Great Depression (percent change in GDP per capita)

*1987 to minimum for migration, 1990 for HDI

CONCLUSIONS

- Evidence of both J-curve and disaster capitalism transition narratives
- Transition cannot be collapsed to a discussion of economic data alone
- We recommend an inequality-based perspective
 - A significant proportion of people did well
 - While others suffered a decades-long crisis
- Implications for current future politics
- Region needs a path towards inclusive development
- Transition will never be forgotten
